[Slide 1]
Deals stall when buyers lack budget. Here is how AWS unlocks that budget.

[Slide 2]
Cloud service providers are aggressively prioritizing their strategic software partnerships. They do this to meet customer demands and accelerate their own growth.

[Slide 3]
Amazon Web Services stands apart as the market leader in partner collaborations. They prioritize these partnerships to drive their infrastructure consumption. Which deal closes faster? A: A solo pitch where you fight for budget alone. B: An AWS-backed pitch where their rep vouches for you. The answer is B. AWS backing removes friction.

[Slide 4]
The business landscape is changing how enterprises procure technology. AppsFlyer is positioned to capitalize on this momentum to embed our solutions deeper into organizations.

[Slide 5]
We bring them cloud usage, they bring us sales acceleration. This is a simple physical exchange. AppsFlyer is a major customer of their infrastructure. When our platform scales, our cloud utilization increases, which directly expands Amazon's bottom line.

[Slide 6]
In exchange for driving their infrastructure consumption, AWS provides AppsFlyer with structured sales acceleration. Consider a stalled deal. What if an AWS rep vouched for you? That is the practical payoff of this partnership.

[Slide 7]
This partnership translates into immediate, tactical advantages to accelerate deal velocity. You gain access to financial investments, a structured co-sell motion, and the marketplace to bypass procurement friction.

[Slide 8]
Co-selling means AWS helps you gain sales advantages. You are not expected to help sell cloud infrastructure. They supply you with account insights, provide advocacy, and facilitate prospect visibility.

[Slide 9]
You must understand the internal roles within Amazon. Account Managers are targeted to grow their assigned accounts' direct cloud spend. Partner Sales Managers hold targets to grow revenue allocated to partners. Partner Development Managers are evaluated on overarching partnership performance. Let's do a quick match. Match the AWS Account Manager to their primary goal. Is it overarching partnership metrics, or growing their assigned accounts' AWS spend? It is growing their assigned accounts' AWS spend. Identifying the Account Manager's specific quota is the right cue to notice.

[Slide 10]
It is a tempting assumption that an AWS rep will automatically help you. The reality is you must sell to them first. AppsFlyer is software, so it does not immediately increase cloud spend. You must prove how it will scale their account later.

[Slide 11]
To secure their advocacy, emphasize that we provide Amazon an entry point into enterprise marketing departments. As AppsFlyer scales a customer's marketing operations, the data generated will inevitably scale the customer's overall infrastructure account.

[Slide 12]
The Marketplace is a streamlined payment processing platform. It entirely eliminates the friction and delays traditionally associated with enterprise vendor onboarding. When you route a deal through the Marketplace, you bypass standard legal delays.

[Slide 13]
The financial transactions are fully handled by Amazon. The customer pays for our platform through their existing billing framework. Amazon manages the backend complexity and disburses the payment directly to AppsFlyer. This step-by-step process ensures there is no confusion about how AppsFlyer gets paid.

[Slide 14]
Customers prefer purchasing through this route because it consolidates corporate expenditure. It removes bureaucratic friction by centralizing Procurement, finance, and legal approvals into one pipeline.

[Slide 15]
Most scaled customers have signed an Enterprise Discount Plan. Purchasing AppsFlyer through the marketplace allows them to retire up to twenty-five percent of those committed cloud spends. This turns historic internal objectors, like Procurement, into enthusiastic supporters.

[Slide 16]
This transactional route is a competitive weapon. It empowers you to retain customers struggling with limited departmental budgets by tapping into broader corporate funds. This reduction in buyer cost-sensitivity establishes a massive competitive advantage. Consider this scenario. A customer has no marketing budget but a massive AWS commit. Do you: A, discount heavily, or B, route through the Marketplace? The right move is B. Routing through the Marketplace taps into their existing cloud budget.

[Slide 17]
We utilize this purchasing route when it guarantees a measurable sales edge, typically for strategic opportunities over one hundred thousand dollars. The strategic fees do not negatively affect your personal opportunity revenue calculations or quota retirement.

[Slide 18]
A staggering amount of budget will change hands through these integrated cloud marketplaces. This is a strategic global play designed to capture our most valuable enterprise accounts.

[Slide 19]
Engaging with our cloud partner solves a major structural hurdle: the corporate communication gap. The AWS rep serves as the trusted bridge connecting your marketing buyer with the ultimate financial decision-makers in IT.

[Slide 20]
Imagine a 200k deal stuck in finance. Here is the exact sequence a top seller used to unblock it using AWS. First, they initiated an internal ad-hoc request. Then, they aligned with their Partner Development Manager. Finally, they utilized the playbooks on our internal hub. Initiating the Ad-Hoc request early is the best strategy to secure AWS support. You have a 150k opportunity. What is your first move? The answer is to initiate an Ad-Hoc request early to secure AWS support.

[Slide 21]
Explore this partnership angle aggressively and early in the lifecycle of any high-value opportunity. You must actively pitch the AWS reps on the mechanics of the deal and ask probing questions to unlock high-value visibility into their portfolio planning.

[Slide 22]
Executed correctly, this strategic partnership provides a massive revenue upside. It unlocks bigger opportunities, prevents customer churn, and establishes a severe competitive advantage.

[Slide 23]
By understanding the mutual growth mechanics, navigating internal account manager motivations, and leveraging the marketplace, you possess the tactical knowledge to increase your deal velocity. Your proactive engagement will be the key to your success.
