

AWS & AppsFlyer Co-Selling: Performance of Understanding Assessment

Here is an assessment designed for a mouse-only UI that tests the learner's flexible understanding of the AppsFlyer-AWS course, requiring them to synthesize, apply, and contextualize knowledge.

The 5 understanding performance questions (allowing multiple correct answers)

Question 1: Navigating Internal Motivations (Contextualizing Knowledge)

- **Prompt:** Understanding your counterpart's financial targets is critical. For each of a three distinct personas: AWS personas (Account Manager (AM), Partner Sales Manager (PSM), Partner Development Manager (PDM), click to select **the one Goal Badge** that accurately reflects their specific financial motivations.
- **Options:**
 1. Increase Direct AWS Spend
 2. Drive Marketplace Purchases
 3. Grow Partner-Allocated Spend
 4. Improve Regional Partnership KPIs
- *Pedagogical Principle: Contextualizing Knowledge.* The learner must place isolated facts (roles) into their broader operational context and deduce relationships.

Question 2: Pitching the Account Manager (Applying to a New Context)

- **Prompt:** You are on a virtual call with an AWS Account Manager who says, "AppsFlyer is a SaaS solution; it won't immediately expand my customer's cloud compute spend today. Why should I help you?". Click to select **the one effective pitch card** to win their advocacy.
- **Options:**
 1. We offer a trusted entry point into protected marketing budgets.
 2. As our platform scales their marketing, their overall AWS infrastructure will organically scale.
 3. Our marketplace revenue is growing 4x YoY.
 4. We offer massive AWS compute discounts.
- *Pedagogical Principle: Application and Problem Solving.* The learner must analyze a real-world objection and flexibly apply the specific value propositions (Marketing entry, indirect AWS scaling, Marketplace growth) that overcome it.

Question 3: Dismantling Bureaucracy (Explaining and Representing a Model)

- **Prompt:** Your deal is stuck. The customer's IT and Finance departments are blocking the purchase due to budget constraints. Select **the one correct mechanism** that Marketplace co-selling enables to fundamentally overcome these budget constraints by reducing the "Buyer Cost-Sensitivity" meter.
- **Options:**

1. Retire up to 25% of Enterprise Discount Plan (EDP) commitments via Marketplace purchases.
2. Allow the customer to bypass procurement review by utilizing pre-approved AWS credits.
3. Utilize the customer's unspent AWS committed spend (EDP/CPO) before year-end expiration.
4. **Convert a portion of AppsFlyer's SaaS purchase into the customer's AWS spending commitment.**

- **Pedagogical Principle: Representing Knowledge Differently and Justifying.** The learner identifies specific structural mechanisms that shift a historic objector into an active supporter.

Question 4: Exposing Dangerous Assumptions (Contrasting and Critiquing)

- **Prompt:** Read the statement: "AWS Account Managers expect us to resell their cloud infrastructure." Select **the one category** that applies to this statement.
- **Options:**
 1. Co-Selling Advantage
 2. **Dangerous Misconception**
 3. Relating to Marketplace
 4. Financial Strategy
- **Pedagogical Principle: Exposing Foundational Assumptions and Contradicting Knowledge.** The learner must critically evaluate statements to distinguish between the authentic strategic motion and a common, destructive sales fallacy.

Question 5: Flawless Execution (Predicting Consequences and Sequencing)

- **Prompt:** You have just identified a massive Tier-1 enterprise account where AWS co-selling will provide a definitive, deal-winning edge. From the list below, click to select **the one action** that represents the most critical, immediate, and high-impact step to secure AWS support.
- **Options:**
 1. Open an internal ad-hoc request ASAP
 2. Proactively reach out to your Partner Development Manager (PDM) to establish momentum
 3. **Utilize the specific outreach templates and playbooks on the AppsFlyer AWS Hub**
 4. Pitch the AWS rep on the deal mechanics since they aren't marketing-savvy
- **Pedagogical Principle: Predicting Consequences and Sequencing.** The learner must determine the optimal sequence of actions for maximum strategic impact.

Final Score Generation (10 Points Total)

Each question is worth 2 points. The final score corresponds to a qualitative rank based on Harpaz's philosophy of flexible performance:

- **2 Points - "Novice Performer":** You are just beginning to recognize the facts. Review the core mechanics of the AWS partnership to move beyond memorization.
- **4 Points - "Emerging Improviser":** You have basic factual recall but need more practice flexibly applying these concepts to real-world sales scenarios.
- **6 Points - "Capable Applier":** You understand the core value of the Marketplace and co-selling motion, and can apply them to standard accounts.
- **8 Points - "Flexible Thinker":** You demonstrate a strong ability to adapt your knowledge, navigate internal AWS motivations, and leverage cloud dynamics to accelerate deals.

- **10 Points - "Master of Understanding":** Flawless performance! You have internalized the strategic cloud alliance and can seamlessly transfer this knowledge into highly effective, real-world execution.
