

[Slide 1]

Why does the world's largest infrastructure provider actively invest in accelerating the sales of an independent software vendor? Mutual infrastructure growth drives the strategic alliance: as AppsFlyer scales, underlying cloud utilization increases, directly expanding AWS annual recurring revenue. Understanding this governing mechanism is your path to professional mastery in enterprise sales. The cloud computing ecosystem has transcended its origins as a mere technological sector to become the undisputed, foundational infrastructure of the modern global economy. Currently generating revenues well over one trillion dollars, this monumental industry is expanding at a relentless and compounding rate of twenty percent year over year. Financial institutions confidently project that this trajectory will only accelerate, driven heavily by the massive, resource-intensive rollout of artificial intelligence across all enterprise sectors, securely poised to exceed two trillion dollars by the year twenty-thirty.

[Slide 2]

Within this rapidly expanding and hyper-competitive environment, hyperscalers are no longer relying solely on direct infrastructure sales. Instead, cloud service providers are aggressively prioritizing and leveraging their strategic software partnerships to meet increasingly complex customer demands and profoundly accelerate their own ecosystem growth.

[Slide 3]

Among these towering industry giants, Amazon Web Services stands entirely apart as the true, undisputed global market leader. They lead the industry not only in pure infrastructure market share and direct revenue, but critically, in the maturity, sheer scale, and strategic prioritization of their partner collaborations across the globe.

[Slide 4]

The business landscape is undeniably getting cloudier, fundamentally changing how modern enterprises procure and deploy technology. AppsFlyer is perfectly positioned to capitalize on this exact momentum, riding the massive wave of cloud adoption to embed our solutions deeper into the world's most sophisticated and forward-thinking organizations.

[Slide 5]

To fully weaponize this ecosystem, you must understand the underlying financial mechanics of why a giant like Amazon actively invests in our ongoing growth. This relationship is a highly calculated, mutually beneficial growth engine explicitly rooted in annual recurring revenue. AppsFlyer is a major, resource-intensive customer of their infrastructure, meaning that when our platform scales and our global customer base expands, our underlying cloud utilization predictably increases, which directly expands Amazon's bottom line.

[Slide 6]

In direct exchange for driving their infrastructure consumption, Amazon Web Services provides AppsFlyer with unprecedented, highly structured sales acceleration. This powerful dynamic elevates our relationship into a deeply strategic global alliance, built firmly on three foundational pillars which include direct financial investments into joint initiatives, a highly orchestrated co-sell motion, and seamless, lucrative access to their integrated marketplace.

[Slide 7]

For our sales professionals specifically, these overarching pillars translate into immediate, tactical advantages designed to rapidly accelerate deal velocity. We gain access to direct financial investments that incentivize buyers, a structured co-sell motion that aligns our respective sales forces, and the marketplace itself, which serves as an incredibly frictionless transactional channel for modern enterprise procurement.

[Slide 8]

A frequent and highly dangerous misconception exists regarding our co-sell agreement: the intuitive but flawed assumption that our sales teams are suddenly expected to help sell cloud infrastructure. This feels plausible because partnerships often imply mutual reselling. However, the causal feature that overturns this is the asymmetry of our products: Amazon exists specifically to help us gain distinct sales advantages, not the other way around. They brilliantly supply our teams with vital account insights regarding internal decision-maker priorities and financial contexts, provide unparalleled advocacy by leveraging their standing as trusted advisors, and facilitate critical prospect visibility through joint events and buyer incentives. Take a moment to internally restate this corrected logic: AWS provides sales advantages; we do not sell AWS services.

[Slide 9]

Successfully executing this joint motion requires you to intimately understand the internal roles within Amazon, as their financial targets vary dramatically. Account Managers are aggressively targeted to grow their assigned accounts' direct cloud spend and are highly motivated to push marketplace purchases, while Partner Sales Managers hold specific targets to grow the revenue allocated explicitly to partners like AppsFlyer. Meanwhile, Partner Development Managers are evaluated strictly on overarching partnership performance metrics, shared opportunity volume, and regional market expansion.

[Slide 10]

Because AppsFlyer is a software solution, successfully selling our platform does not immediately expand a customer's underlying cloud compute spend on day one.

Professional Insight: Assuming an Amazon Account Manager will automatically support your deal out of goodwill is a critical logical flaw. Their behavior is strictly governed by their quota targets. If your solution does not demonstrably drive their specific growth goals, you will not receive their advocacy.

You must actively and aggressively sell our distinct value proposition directly to them, explicitly proving that prioritizing our solution actively drives their specific, individual growth goals.

[Slide 11]

Consider this contrasting case:

Strategy A: An AppsFlyer seller pitches the technical superiority of our attribution models to an AWS Account Manager.

Strategy B: An AppsFlyer seller demonstrates how our platform scales the customer's marketing operations, thereby increasing the volume of data generated and scaling the customer's overall AWS compute utilization.

Which strategy succeeds? Pause here and privately write down your justification for which approach will secure the Account Manager's support before continuing.

Strategy B succeeds because it aligns directly with the governing incentive structure. To secure this critical internal advocacy, you must highlight that our marketplace revenue is skyrocketing at four times year-over-year growth, with average won opportunities frequently exceeding four hundred and fifty thousand dollars. Most crucially, emphasize that we provide Amazon an invaluable, highly coveted entry point into enterprise marketing departments. As AppsFlyer successfully scales a customer's marketing operations, the massive volume of data generated will inevitably scale the customer's overall infrastructure account as a highly profitable, undeniable result.

[Slide 12]

At its most fundamental operational level, the marketplace functions as a streamlined, highly efficient payment processing platform meticulously designed to allow customers to effortlessly pay software partners. It entirely eliminates the excruciating friction and agonizing delays traditionally associated with enterprise vendor onboarding and complex legal creation.

[Slide 13]

The financial transactions are fully, securely, and transparently handled by Amazon from start to finish. The customer simply pays for our platform through their existing, pre-approved, and pre-negotiated billing framework. Once the transaction successfully clears, Amazon gracefully manages all the backend financial complexity, collects the global funds, and securely disburses the final payment directly to AppsFlyer.

[Slide 14]

Beyond simple transactional convenience, customers eagerly prefer purchasing through this route because it radically consolidates corporate expenditure. It entirely removes immense bureaucratic friction by centralizing procurement, finance, and legal approvals into one trusted pipeline, dramatically reducing standard regulatory red tape and accelerating the time to value for the marketing teams who desperately need our technology.

[Slide 15]

The most powerful financial incentive, however, lies in pre-existing cloud contracts. If a scaled customer has signed an Enterprise Discount Plan or Private Pricing Agreement, then purchasing AppsFlyer through the marketplace allows them to retire up to twenty-five percent of those massive, committed cloud spends. This causal mechanism brilliantly turns historic internal objectors, such as highly rigid procurement and conservative finance departments, into enthusiastic supporters.

[Slide 16]

Predictive Analysis: You are engaging a tier-one enterprise where the marketing team is eager to deploy AppsFlyer, but the procurement department is highly cost-sensitive and blocking the deal due to budget constraints. Privately formulate a written prediction on how introducing the AWS Marketplace alters the negotiation dynamics.

The causal logic: By routing the transaction through the AWS Marketplace, the customer taps into broader corporate cloud commitments rather than limited departmental budgets. This fundamental reduction in buyer cost-sensitivity establishes an insurmountable competitive advantage over rivals like Adjust, Singular, and Kochava, completely dismantling complex stakeholder objections before they even arise.

[Slide 17]

Internally, our strict policy is to utilize this purchasing route only when it guarantees a distinct, measurable sales edge. We typically reserve this powerful motion for strategic opportunities valued over one hundred thousand dollars, requiring a solid, well-documented business case for internal approval.

Precision Point: While AppsFlyer pays listing fees to AWS for facilitating these transactions, these strategic fees are absorbed at the corporate level and do not negatively affect your personal opportunity revenue calculations or quota retirement.

[Slide 18]

The sheer financial scale and global impact of this co-selling motion simply cannot be overstated. Current industry projections confidently estimate that a staggering sixty billion dollars will change hands through these integrated cloud marketplaces by the year twenty twenty-six. This is a highly strategic, permanently transformative global play designed to capture and aggressively expand our most valuable, tier-one enterprise accounts across every major business hub.

[Slide 19]

Engaging deeply with our cloud partner perfectly solves the single largest structural hurdle we face in closing massive enterprise deals: a deep corporate communication gap. Our primary buyers are marketing teams who rarely understand their company's broader cloud commitments, and our sellers rarely speak directly to the IT and finance leaders who hold those macro-budgets. The cloud account manager serves as the crucial, trusted bridge actively connecting our isolated marketing champions with the ultimate financial decision-makers.

[Slide 20]

When you successfully identify a strategic account where co-selling could provide a definitive, deal-winning edge, absolute speed and flawless procedural execution are highly critical. You must immediately open an internal ad-hoc request to accurately signal the opportunity, proactively align with your designated Partner Development Manager to establish early momentum, and extensively utilize the comprehensive playbooks heavily documented on our internal hub.

Common Reasoning Trap: Waiting until the late stages of a sales cycle to engage AWS is a critical error. The AWS Account Manager requires time to navigate their own internal structures and influence the customer's procurement team. Late engagement nullifies their ability to act as a strategic bridge.

[Slide 21]

The unanimous advice from our highest-performing sellers is to explore this partnership angle aggressively and as early as possible in the lifecycle of any high-value strategic opportunity. Remember, cloud representatives are brilliant and highly technical, but they are rarely marketing-savvy. You must actively pitch them on the mechanics of the deal, ask probing questions to unlock high-value visibility into their internal portfolio planning, and fiercely garner their direct support.

[Slide 22]

Executed correctly and consistently, this strategic partnership reliably provides a truly massive revenue upside. It successfully unlocks significantly bigger opportunities, actively prevents painful customer churn, and establishes a severe competitive advantage. By mastering this collaborative motion, you will miraculously turn frustrating administrative roadblocks into your most powerful, highly motivated sales champions.

[Slide 23]

Self-Assessment Critique: In light of the incentive-alignment frameworks and causal mechanisms discussed, internally formulate a critique of your current approach to your top three strategic accounts. Are you actively leveraging the AWS Account Manager's financial motivations? Are you utilizing the Marketplace to bypass procurement friction? Identify the gaps in your strategy and map the necessary stakeholder nodes to correct them.
