

Here is the duplicated assessment with the correct answers highlighted in yellow for your reference.

The 5 understanding performance questions

Question 1: Bridging Cultural Distance (Contextualizing Knowledge)

- **Prompt:** You are a US-based leader tasked with launching a strategic initiative with a newly acquired team in Brazil. Based on the concept of Cultural Intelligence (CQ), click to select **the one approach** that best aligns with their cultural mechanics for building trust.
- **Options:**
 1. Immediately assign strict deadlines and track task completion to demonstrate your reliability.
 2. **Schedule extended introductory meetings focused on personal backgrounds and social connections before discussing project details.**
 3. Send an explicit, simple, and transparent directive detailing the project phases.
 4. Minimize verbal communication and rely strictly on written protocols to avoid misunderstandings.
- *Pedagogical Principle: Contextualizing Knowledge.* The learner must place isolated facts (Low-Context vs. High-Context cultures) into their broader operational context and deduce that Brazil requires relationship-oriented social connection to build trust, unlike the task-oriented US culture.

Question 2: Mitigating Virtual Friction (Applying to a New Context)

- **Prompt:** Your geographically dispersed team relies heavily on digital tools. Lately, several remote members have expressed feeling isolated from the headquarters' decisions and believe their opinions carry no weight. Using the SPLIT framework, click to select **the one effective action** you should take to mitigate this specific social distance.
- **Options:**
 1. Restructure the formal organizational hierarchy to clarify reporting lines.
 2. **Initiate frequent, brief contact to demonstrate that their individual contributions matter.**
 3. Standardize your communication terminology to eliminate language barriers.
 4. Implement a more advanced AI workflow tool to automate their tasks.
- *Pedagogical Principle: Application and Problem Solving.* The learner must analyze a real-world remote work challenge (Identity and Technology friction) and flexibly apply the specific "I am here for you" mitigation strategy to overcome it.

Question 3: Diagnosing Artificial Harmony (Explaining and Representing a Model)

- **Prompt:** During a crucial strategy meeting, a controversial new AI workflow is proposed. You notice that team members are politely nodding in agreement, but no one is offering critiques or engaging in passionate debate. Based on Lencioni's model, select **the one foundational dysfunction** that is primarily driving this artificial harmony.

- **Options:**
 1. Avoidance of accountability
 2. Inattention to results
 3. **Absence of trust**
 4. Lack of commitment
- **Pedagogical Principle: Representing Knowledge Differently and Justifying.** The learner identifies the specific structural mechanism within Lencioni's Five Dysfunctions of a Team that shifts a group away from productive debate and into a state of stifled ideas.

Question 4: Exposing Dangerous Assumptions (Contrasting and Critiquing)

- **Prompt:** Read the statement: "To demonstrate empathy regarding the transition to Agentic AI, a leader should tell their employees that they feel sorry for the disruption it is causing them." Select **the one category** that applies to this statement based on the course definitions.
- **Options:**
 1. Radical Employee Centricity
 2. Empathic Concern
 3. **Dangerous Misconception**
 4. Stagility
- **Pedagogical Principle: Exposing Foundational Assumptions and Contradicting Knowledge.** The learner must critically evaluate statements to distinguish between authentic empathy (feeling *with* someone) and a common, ineffective leadership fallacy (merely feeling *for* them).

Question 5: Harnessing Destructive Arguments (Predicting Consequences and Sequencing)

- **Prompt:** Two senior developers are locked in a heated disagreement over which software architecture to use. Tempers are flaring, and the project is stalling. From the list below, click to select **the one immediate action** that represents the best use of "conflict-agility" to harness this situation constructively.
- **Options:**
 1. Apply the "Smoothing" strategy and ask one developer to give up their goal to maintain the relationship.
 2. **Require both developers to use the Claim-Support-Question routine to justify their architectural choices with evidence.**
 3. Deploy the See-Think-Wonder routine to internally analyze why they are arguing.
 4. Step in with a "Forcing" strategy to make an executive decision and avoid further delays.
- **Pedagogical Principle: Predicting Consequences and Sequencing.** The learner must determine the optimal application of a specific active thinking routine to transform a destructive emotional conflict into a constructive, evidence-based thinking event.

Final Score Generation (10 Points Total)

Each question is worth 2 points. The final score corresponds to a qualitative rank based on Yoram Harpaz's philosophy of flexible performance:

- **2 Points - "Novice Performer":** You are just beginning to recognize the facts. Review the core mechanics of the PaiDevo model and team dynamics to move beyond memorization.
- **4 Points - "Emerging Improviser":** You have basic factual recall but need more practice flexibly applying these concepts to real-world global and AI-driven leadership scenarios.
- **6 Points - "Capable Applier":** You understand the core value of Cultural Intelligence and team alignment, and can apply them to standard interpersonal conflicts.
- **8 Points - "Flexible Thinker":** You demonstrate a strong ability to adapt your knowledge, navigate internal team dysfunctions, and leverage "Stagility" to accelerate organizational trust.
- **10 Points - "Master of Understanding":** Flawless performance! You have internalized the Global Corporate Leadership architecture and can seamlessly transfer this knowledge into highly effective, real-world execution.
